

Environmental Management Policy

Stainless Plating is a surface treatment company which provides a variety of electro-chemical finishes to improve the performance, lifetime, durability and visual appearance of customer's products.

The business impacts on the environment in a number of ways and we are committed to reduce the effect of these where possible. In particular we are committed to:

- Complying with relevant environmental legislation and regulations, and the environmental requirements of our customers.
- Reducing environmental risks on site so that we prevent the likelihood of a pollution incident.
- Continually improve our resource efficiency by using less materials and energy where practicable and producing less waste.

We have set objectives and targets to address our environmental impacts and all employees are committed to work towards achieving these.

We are committed to:

- Minimising the release of metals and other pollutants.
- Reduce waste.
- Improve the efficiency of energy and water usage.

This policy is communicated to all employees, customers and suppliers and is freely available to the public.

The commitments in this policy are managed and delivered through our environmental management system. We will review our compliance with these commitments and our progress against the objectives and targets, at the annual management review meeting.
